

Jake Hilber

Principal Engineer / Principal Architect

Wisconsin, USA
APAC experience
[linkedin.com/in/jakehilber](https://www.linkedin.com/in/jakehilber)

PROFESSIONAL SUMMARY

Principal engineer and architecture-minded technologist with a background across networking, infrastructure, voice/contact center systems, security, data integration, and large-scale troubleshooting. Experienced with Cisco-focused network, voice, and contact center environments, global/APAC operations, and the bridge between systems operations, architecture, automation, analytics, and identity.

CORE STRENGTHS

Network, Voice, and Contact Center	Infrastructure and Hybrid Systems
Cisco routing/switching, CUCM, Webex, Jabber, SIP, CUBE, Genesys on-prem and cloud concepts, packet capture, logs, and routing strategy.	Windows, Linux, VMware/ESXi, vSwitches, data center hardware, VPN, remote access, cloud networking fundamentals, and service delivery operations.
Data and Integration	Security, Identity, and Standards
SQL Server, PostgreSQL, DBeaver, Squirrel SQL, Python, pandas, Jupyter, REST/JSON, GraphQL, API testing, reporting, and analytics.	MFA, SSO, SAML, OAuth/OIDC, RBAC, PKI, TLS, Zero Trust concepts, NIST, CIS, ISO/IEC, SANS, IEEE, and governance-aware engineering.

SELECTED TECHNICAL TOOLKIT

Wireshark | Postman | GitHub | GNS3 | Cisco Packet Tracer | SolarWinds | PRTG | Nagios | RTMT | SQL Server Management Studio | PostgreSQL | DBeaver | Python | pandas | Jupyter | Power BI | Tableau | Terraform | Ansible | Docker | Kubernetes fundamentals

ARCHITECTURE CAPABILITY MODEL

- Designs for high availability, redundancy, scalability, resiliency, performance, and cost awareness.
- Connects infrastructure, voice, cloud, security, data, observability, and automation into coherent operating models.
- Uses root cause analysis, log review, packet analysis, and protocol knowledge to turn incidents into design improvements.
- Builds toward API-driven integrations, event-driven architecture awareness, and AI-assisted engineering workflows.

CAREER FOUNDATION

- Started in municipal IT supporting police, fire, and city service systems.
- Earned CCNA during high school and completed a degree at University of Wisconsin-Stout.
- Worked primarily as a Cisco-focused network, voice, and contact center engineer/architect.
- Lived and worked across Asia-Pacific for approximately eight years supporting distributed operations.

CURRENT GROWTH AREAS

Data science and analytics, Anaconda/Jupyter workflows, API development, Git-based project work, Genesys Developer, NIST/CIS/ISO/ISACA/ISC2 learning paths, and AI-assisted engineering practices.
